BANK CLERKS HOLD A SMOKER Addresses Made by Festus J. Wade and Others.

Fifty-four members and half as many

guests of the organization attended the smoker given by the St. Louis Chapter of the American Institute of Bank Clerks last

smoker given by the St. Louis Chapter of the American Institute of Bank Clerks last night at the Stock Exchange building to hear papers and addresses by local clerks and visitors.

H. H. Wernse addressed the meeting on the subject of "The Bank Clerk and His Duttes," in the course of which he referred to the high moral and intellectual standard which obtains among employes of American banking institutions. L. S. Mitchell read a paper on "The Reciprocal Relations Hetween Officer and Employe."

Festus J. Wade, president of the Mercantile Trust Company, spoke informally on the tendency of concentration and approved the plan followed by the bank clerks in organizing for the furtherance and protection of their interests.

Among the members and guests present were: E. J. Costigan, F. X. Ryan, W. P. Durkan, Landon Carter, Charles B. Schmitt, James McGinnite, Louis G. Karst, H. R. Rehme, V. E. Bilss, Festus J. Wade, D. towach or any form of stomach trouble Dr. Buchanan Burr, St. Paul Building, New York, writes under date of April

25th, 1901:

"I have for some time used Eupepsia Tablets in the treatment of indigestion and dyspepsia, with uniformly good results. As they are carefully compounded from a well-known formula, containing the best digestive ferments and gastric stimulants, I can recommend them not only as a great benefit in cases of dyspepsia and indigestion, but as perfectly safe to place in the hands of the general public."

Two weeks' treatment at your drugsist's or direct for 50 ernix. A treatise on Stomach Troubles and three days' treatment mailed free.

Your memery back if they fail.

EVPEPSIA CO., 323 Clark Ave., 34 Levis.

34. 38 and 42 inch bust.

The sleeves are shaped with inside seam only. They fit the upper arm closely and flare in a graceful bell, which is finished with a deep rolling cuff.

Very dainty combinations of colors are seen in these robes, and some are almost oriental in effect, being made of flannel in Persian design and trimmed with bands of rich red or deep yellow.

To make the robe in the medium size will require six yards of thirty-six-inch material. The pattern, No. 8479, is cut in sizes for a 34, 35 and 42 inch bust measure.

Ladles' Redingote, No. 8491—After many seasons of neglect and oblivion, long coats have at last blossomed out in full force and are on the high road to an extended vogue in fashion's realm. There are all sorts of long coats at present, any one of which has the stamp of approval. Ragians, with loose back and fronts, which hang directly from the shoulders, completely envelop the figure, and have odd-looking sleeves that give a decidedly narrow appearance to the shoulders, are still quite popular. There is another style of coat made with loose bishop sleeves and adorned with double or triple shoulder capes, which is worn by slender women.

The redingote is, however, the general favorite. A smart coat in this style is shown here made of dark gray breadcioth. It is fitted with back, side-back and underarm seams, which display gracefully curved seams that are extended to the lower edge of the garment.

MENT-LADIES' REDINGOTE. 34, 28 and 42 inch bust.

7.1

The fronts are loose and fasten in single-breasted style under the fly. They are deeply underfaced with cloth and rolled back to form revers, which meet the turn-down collar of velvet in shallow notches.

The sleeves are shaped with upper and under portions, faced with cloth to simulate a cuff.

a cuff.

Coats in this style are made of cheviot, melton, friezo or cloaking, and severely plain in finish. Those developed in cravenette serve also in piace or a mackintosh.

To make the redingote in the medium size will require five yards of fifty-four-inch material. The pattern, No. 8491, is cut in sizes for a 34, 38 and 42 inch bust measure.

# AGRICULTURAL HALL WILL BE OUTSIDE FOREST PARK SITE.

Private Property Across the Skinker Road Is Selected by World's Fair Builders for the Biggest Structure of the Exposition, Giving More Space for Elaboration of Designs.

It became known yesterday for the first time that the great Agricultural building. the giant of the Exposition, will be located entirely outside of the Force Park site, across Skinker road, on the private tracts owned by Thomas W. Skinker, De Munn, Julia Maffitt and Tesson estates.

This announcement came as a surprise, es it effectually disposes of the vast struc-ture by completely disassociating it with the main picture of the World's Fair. The final location of the building also sets at rest the rumors that an extension of the site yould not be sought west of Forest Park. Condemnation papers were recently pre-pared by General Counsel Blair against the acts on which Director of Works Isaac

Taylor now says will be located the mammoth structure which he is designing Reference to the ground plans of the main exhibit buildings shows a great area of vacant territory between the Art building and the projected site of the Agricultural building. This stretch of ground Mr. Taylor says will be used for several other buildings

to be erected by the Exposition company. building, a beautiful choral hall and other structures of this character remain to be located by the company, and the inference is that some of them will find places on the ground which was supposed ould be reserved for the Agricultural ullding. The architectural scheme is to place the Agricultural building far enough away from the others to avoid destroying

the effect of the main spectacle, PROPERTY HAS ALREADY BEEN NEGOTIATED FOR.

It is understood that the Exposition com pany has almost reached an agreement with the owners of the tracts on which it is proposed to erect the Agriculture build-The acquiring of this territory will rd ample room for the anthropological and ethnological exhibit of uncivilized

peoples, which Director Taylor says will be assigned to ground in the southwestern sec-tion of the site. Efforts are also being made to acquire a strip of territory parallel with and con-tiguous to the north line of the Fair site. This ground lies within the Catiln tract. Trackage facilities will be established

here. The intention of the Exposition management is to have a massive union sta-tion at this point for the unloading of pas-sengers from the Wabash and other roads. which will stop their trains near the main entrance to the Exposition. If the Catlin strip is obtained it may be necessary to move the depot of the Transit Company back from its present location to some more convenient point on the acquired strip. All of these lines would then unload their passengers near the entrance of the World's Fair, which will be located inside the park site. An elaborate approach will be constructed. Chief Designer Masqueray is now at work on the portal and the approach.

Reference to the ground plan of the Exposition will show that in the foreground of the main plat on the extreme right, towof the main plat on the extreme right, tow-ard Washington University, there is an un-filled space, which leaves the arrangement unbalanced. On this space, Director of Works Taylor says, the Mechanics' Hall will be located. This building has not yet been designed, but when it is ready for erection the plans will have been completed. Between the facades of the Liberal Arts and Social Economy buildings to the east of the grand portal and the Mines and Metallurgy and Mechanics buildings to the west, there remains a distance of at least 1800 feet up to the north line of the Forest

west, there remains a distance of the Forest 800 feet up to the north line of the Forest in the center will be Park site. This space in the center will be taken up by the grand entrance. On its left and right smaller buildings will be erected. AQUATIC SHOW PRETTY FEATURE OF EXPOSITION

FEATURE OF EXPOSITION.

Nothing has been said heretofore about the magnitude of the grand basin in front of the Art building and the great fountain which will arise from the center of the basin. The basin will be 600 feet in diameter. From its head where the cascades will enter it to the end of the grand lagoon, 300 feet in width, which continues the scheme of the basin between the facades of the Liberal Arts building and the Electricity building, the distance will be 1,500 feet. At this lower end of the basin arrangement the east and west lagoons will rejoin the basin under a picturesque bridge. The east and west lagoons will be 75 feet in width.

west lagoons will be 75 feet in width.

Director of Works Taylor has been conferring for several days with an expert designer of waterfalls. The Director has about decided on the plan of the cascades. His idea is to have three bridal veil falls plunging from the total height of sixty-one set. To get the spray effect that is sought he will turn a mere ribbon of water over the edge of the miniature precipice from which the water will make its leap. These sheets of water will be three inches thick and 1,000,000 gallons of water will in this way be sent over the fall every hour. The water will be returned to the reservoir underground behind the Art building by means of a pumping plant.

expects to organize his force of sculptors by December 1, when he will return from New York City, to which point he started last night, after a conference of two weeks with Director of Works Isaac S. Taylor. His studios at the Exposition site will be one of the most interesting features of the World's Fair construction period, which will be in full swing before the first of the year. Professional models from Italy and France and the Eastern art centers will be brought to the Exposition site by Sculptor Ruckstuhl. These models are men and women who have made the study of posing for sculptors the work of their lifetime. They will be housed at the home of the Service building. The sculptors who will be selected by Supervisor Ruckstuhl with the approval of the Director of Works, will also make their home for a year and a half on the Exposition ground.

The branches of the decorative establishment under the direction of Supervisor Ruckstuhl will cover all monumental work.

ary on the main entrances to buildings. Sketched designs of the proposed figures must be prepared, clay models must be made from living models, and the molds must be prepared and the staff cast for the final figures to be mounted.

"My workshop will be worth visiting while this labor is going on," said Mr. Rickstuhl before his departura. "When the corps of sculptors are at work it will prove one of the most interesting sights in the whole construction of the Exposition. the whole construction of the Exposition, All of the work will be done on the ground."

#### PLANS NEARING COMPLETION. Design for Government Building

Expected Next Week. J. Knox Taylor, Supervising Architect of the United States Treasury Department, has notified Director of Works Taylor that the plans of the Government building at the Exposition will arrive in St. Louis in about one week. Director Taylor says that when the plans reach him he will have them photographed and delivered to the press for publication.

The Government group will stand on the The Government group will stand on the Art hill overlooking the Social Economy and Education buildings in the grand plcture. The plans for the structure have been practically approved by the Government board in charge of the Federal exhibit. The board has examined and indorsed the Supervising Architect's scheme. Nothing remains but the approval of Director of Works Taylor, who may suggest some slight modification if he deems best. The plans will be put into final shape and be approved formally by the Government Board. Actual work of construction can then begin. This work, it is estimated by the Supervising Architect, will require about twelve months.

The general description furnished by Supervising Architect Taylor of his design is that the main building will cover about 190, 609 feet of floor space and will have no interior columns. This effect will be obtained by using steel trusses. The main building will be 900 feet in length, about 180 feet in width and 65 feet to the cornice line to conform with the uniform elevation of the Exposition buildings. Its enormous floor space and the absence of interior columns will make it the best building yet designed for exposition purposes, while from an artistic point of view it is pronounced to be far superior to structures of finis kind heretofore designed by the Government.
